

Tree Survey for Indian Valley – Moraga, CA

November 2, 2017

A pre-survey tree inventory will be conducted to identify the existing trees within the proposed civil and remedial grading limits.

Upon completion of the above work, the applicant will begin to perform a ground survey to locate all trees 5 inches or more in diameter measured three feet above natural grade relative to the proposed civil and remedial grading limits.

Upon completion of above work, the applicant in conjunction with the project Arborist will determine any impacts to the existing trees. A map of the surveyed trees will be provided.

We anticipate having this information available to the Town approximately February 2018.
